Securing Future Financial Security With CryptoCurrency Now

Step #1
* Purchase Pre-Paid AT&T Cell Phone With HD Camera
* Purchase Pre-Paid AT&T Service
* Purchase Black & White Printer
* Purchase x750 Page Black 3+ Ring Binder
* Purchase x250 or x500 Pack Transparent Paper Plastic Sleeves
* Purchase Pack of 10 DVD Discs
* Activate Pre-Paid AT&T Cell Phone With New AT&T Phone Number
* Set New 4 – 8 Digit Pin Code On The AT&T SIM Card
* Encrypt The Pre-Paid AT&T Cell Phone With HD Camera

Step #2
* Travel To a CoinMe ATM Location With Friend or Family Member and Record These Things In x1 4K Video With Timestamp Inserted In The Middle of The Video:
** Record Yourself Holding Up The Initial $20 Bill and All Other Physical Currency Front and Back In Front of the CoinMe ATM Where All of The Serial Numbers On Each Physical Currency Note Are Visible In The Video
** Record Yourself Holding Your Identification Card Front and Back While Stating Your Full Legal Name
** Record Yourself Verbally Stating The Year, Month, Day, Hour, Minute and Second of The Current Timestamp
** Record Yourself Pressing The Screen Options To Purchase Specific CryptoCoin From Available CryptoPlatforms
** Record Yourself Inserting The Cash Notes Into The CoinMe ATM
** Record The Entire Screen Transaction
** Record The Receipt Paper Dispensing From The CoinMe ATM
** Record Yourself Holding Up The Receipt Paper Front and Back
** Save The Video Recording

Note: *This is the only way to prove in the legal system that you purchased these whole CryptoCoins at this exact point in time and that you completely legally own these CryptoCoins. Now no one can ever steal, seize or take away these CryptoCoins at any point in the future.*

Step #3
* Create Upload Timestamp Watermark In The Upper Right Corner of The Recorded Video and Upload The Recorded Video To Your YouTube Account. Set Visibility Options To: Private With Link Only
* Create Account On CoinMe.com
* Create Account On Crypto.com
* Send YouTube Link of The Recorded Video To CoinMe.com and Crypto.com Administration By Electronic Mail Message
* Verify All Accounts With Personal Information / Phone Number, Identification Card, Social Security Number and Physical Address
* Download The Official Polygon CryptoCoin Wallet Application Software From: https://polygon.technology
* Download The Official BITCoin CryptoCoin Wallet Application Software From: https://bitcoin.org/en/choose-your-wallet
* Download The Official Ethereum CryptoCoin Wallet Application Software From: https://ethereum.org/en/wallets
* Download The Official Stellar CryptoCoin Wallet Application Software From: https://stellar.org
* Download The Official DogeCoin Wallet Application Software From: https://dogecoin.com/wallets
* Download The Official LiteCoin Wallet Application Software From: https://litecoin.org
* Order Crypto.com Metal Debit Card Backed By VISA

Step #4
* Print Each CryptoCoin Wallet Address For Sending and Receiving From CoinMe.com
* Print Each CryptoCoin Wallet Address For Sending and Receiving From Crypto.com
* Print Each CryptoCoin Wallet Address For Sending and Receiving From The Official CryptoCoin Wallet Application Software
* Export The RAW CryptoCurrency CryptoCoin Block Text From Each CryptoCoin Wallet Application Software
* Print Each RAW CryptoCurrency CryptoCoin Block Text Per Page
* Send Some or All of The CryptoCoins From Each Respective CryptoCurrency Platform To Crypto.com Account
* Export The RAW CrytoCurrency Blocks From Crypto.com
* Print Each RAW CryptoCurrency Block Text Per Page
* Print Logo of Each CryptoCurrency Platform With QR Code On Each Unique Page
* Place Each RAW CryptoCurrency Block Text That Was Printed Within Each Transparent Sleeve and Place Within Binder
* Place Printed CryptoCurrency Logo In Front of Each Section of Printed CryptoCoins Within Binder

Step #5
* Save Organized RAW CryptoCurrency Block Text Files and QR Codes To USB Data Storage Stick
* Save Recorded Videos To The USB Data Storage Stick
* Encrypt The USB Data Storage Stick With BITLocker or Another USB Data Encryption Tool
* Write / Burn The RAW CryptoCurrency Block Text Files and QR Codes To DVD Disc
* Write / Burn The Recorded Videos To DVD Disc

Step #6
* Deposit The Binder, DVD Disc and Encrypted USB Data Storage Sticks To Bank Safety Deposit Box
* Bury a Copy or Several Copies of The DVD Disc and Encrypted USB Data Storage Stick In Random Locations

You will be able to take a picture of each page with your mobile cell phone device to instantly deposit the CryptoCurrency back into your CryptoWallet Application Software installed on your laptop computer, desktop computer and / or mobile cell phone device as well as hosted on the specific CryptoCurrency Hosting Web Server.

Optional: *Scramble Each RAW CryptoCurrency Block Text Data With Character Randomizer Software and Write Down The Character Randomizer Algorithm For Future Descrambling. This will prevent the corrupt bank management, corrupt law enforcement, corrupt government from physically getting the printed coins out of the binder if in the event they get access to your safety deposit box. They will never know the descrambler algorithm and therefore they will never be able to garnish the money, tax the money or confiscate the money because they will not be able to decrypt the information.*

How CryptoCurrency Platforms and CryptoCurrency BlockChains Really Work

Every CryptoCurrency BlockChain is based on certain mathematics, encryption algorithms and hash algorithms. Imagine that every unique non-repeating string within the Secure-HASH-Algorithm, Version: 1 is a unique CryptoCoin. IF: the Secure-HASH-Algorithm, Version: 1 is capable of generating 10 to the power of 48 completely unique alpha-numeric strings that are 160 characters in length.

This would be: *1,461,501,637,330,902,918,203,684,832,716,283,019,655,932,542,976*
Completely unique and non-repeating alpha-numeric strings that are 160 characters long each.

However: *Since each international system of currency does not permit any amount of money together as being in circulation as more than sexT-Illion (which would be more than 8 places) one must stop at SexT-illion and,*

This would be: *$ 1,000,000,000,000,000,000,000,000,000,000 or* **One NoN-Illion, Zero OcT-Illion, Zero SexT-Illion, Zero QuinT-Illion, Zero Quad-Rillion, Zero Tr-Illion, Zero BI-Illion, Zero MiL-lion, Zero Thousand, Zero Hundred – United States Dollars.**

Now imagine that every non-repeating and unique Secure-HASH-Algorithm, Version: 1 string is a unique CryptoCoin that is worth $0.1 Cent in the United States Dollar Currency System. IF: it is true that at any given time every non-repeating and completely unique SHA-1 string is worth $0.1 Cent within the United States Dollar Currency System then:

*1,000,000,000,000,000,000,000,000,000,000 * $0.1 Cent = 10 to the Power of 29 $United States Dollars: One Hundred OcT-Illion $United States Dollars or $100,000,000,000,000,000,000,000,000,000*

Now imagine that every non-repeating and unique Secure-HASH-Algorithm, Version: 1 string is a unique CryptoCoin that is worth $0.000000000000000000000001 Cent in the United States Dollar Currency System. IF: it is true that at any given time every non-repeating and completely unique SHA-1 string is worth $0.000000000000000000000001 then:

*1,000,000,000,000,000,000,000,000,000,000 * $0.000000000000000000000001 Cent = Ten Million United States Dollars or $10,000,000*

Imagine that a CryptoCurrency BlockChain System is capable of generating up to 1,000,000,000 or One Billion completely unique non-repeating 200 character long strings where each unique and non-repeating string is worth $0.1 Cent within the United States Dollar Currency System. IF: it is true that on the date: May, 1st of the year 2008 you purchase 5,000 completely unique and non-repeating strings where each unique and non-repeating string represents one complete and whole CryptoCoin from that specific CryptoCurrency BlockChain System for $0.1 Cent within the United States Dollar Currency System, then: 5,000 * $0.1 = $500 United States Dollars spent on owning 5,000 completely unique and non-repeating alpha-numeric strings that represent one whole and complete CryptoCoin.

Now imagine that on the date: May, 1st of 2018 which is approximately ~10 years later than the date: May, 1st of 2008 that specific CryptoCoin in that specific CryptoCurrency BlockChain System is worth $10.00 whole United States Dollars, then: 5,000 * $10.00 = $50,000 United States Dollars.

Why is that specific CryptoCurrency Coin worth so much money in the future ?
Because as more and more people internationally begin to purchase the CryptoCoins where only One Billion completely unique and non-repeating 200 character long strings can be purchased out of that entire CryptoCurrency BlockChain each whole CryptoCoin valuates to be worth more and more money because there is a limit on how many possible CryptoCoins can be issued out of that specific CryptoCurrency Platform. Since there is a limit on the number of CryptoCoins in circulation in cyberspace within that specific CryptoCurrency BlockChain then it is only possible for each whole CryptoCoin to continue appreciating in value because there is a limit of the number of whole ones in circulation.

As each whole CryptoCoin continues to appreciate in value to a point of being worth 10,000% more than what its first issuance value was worth then it is only possible for each individual person to buy a fraction of a whole CryptoCoin from that specific CryptoCurrency Platform because they will never have enough money at any given time to purchase a whole one after it is worth more than $2,500 United States Dollars. Since it then only possible for each individual person to purchase a fraction of a whole CryptoCoin on that specific CryptoCurrency Platform after it is worth more than $2,500 the entire collective money pot of international money being thrown into that specific CryptoCurrency Platform money pot increases forever because every physical currency in the world can be printed in unlimited quantities forever and that specific CryptoCurrency Platform has a limited number of possible CryptoCoins.

And, as the United States Dollar depreciates in value due to the unlimited amount of United States Dollars being in circulation in the physical world at any given time the CryptoCoin continues appreciating in value forever because there is a limit on how many whole ones can be issued out of the BlockChain. The whole and unique CryptoCoins can only keep diving in value forever by using another mathematical algorithm because it is expected that no one will ever be able to purchase a whole one once it is worth more than $2,500+. As one individual person spends $5 United States Dollars or more on owning a fraction of a whole CryptoCoin from that specific CryptoCurrency Platform your CryptoCoins will continue appreciating in value forever because you will never spend them until they reach a point of being valued in the Ones of Millions of United States Dollars. This is ingenious because the entire system defeats the fiat or non-backed United States Dollar of present-day.

Why is it only possible for a limited amount of CryptoCoins to be issued ?
This is due to limitations on mathematics, limitations on exponents and limitations on computer calculating address spaces.

Why is the United States Dollar Worthless ?
The United States Dollar is actually completely worthless as of after the decades: 1940s because the United States Mint and the United States Treasury after the decades: 1940s can print an unlimited amount of paper money at any given time that is not backed by any gold, silver or any material standard. At one point-in-time anyone that owned a collection of U.S. $1 Notes that stated they were backed by Gold and Silver the Bank was required to give that person physical Gold and Silver Bullion in exchange for the U.S. $1 Notes.

As the United States Government prints unlimited amounts of money at any given time into circulation in different areas and in different communities within its territorial borders there exists x amount of different kinds of notes in circulation in that specific community at any given time before they can confiscate it from the banks or from that specific community and destroy it. Because the United States Dollar can be printed in unlimited quantities, unlimited amounts of specific denominations and unlimited collective amounts and because it is not backed by Gold, Silver or any material standard and as the federal minimum wage increases at y amounts over the span of z years every product that is available within physical reach in the local communities also increases in money value. Toilet paper and cow milk for instance will always increase in price as the minimum wage increases therefore it is impossible to save enough money where that stash of money available in the future provides an edge over the general working class population.

This system keeps the business owners and the manufacturers in the "Middle Class" while the workers are kept in the "Low Class or Poverty Class" and while the Company Owners, the European Nobility that own the land in the U.S. that create materials such as trees, cotton, metals and minerals and other necessities as well as other groups that own the land within the U.S. that the businesses buy those material products from in order to create products to sell to the U.S. Citizen populations are always kept in the "Upper Class".

Now imagine that if on the date: *May, 1st of 2010 you purchased 10,000 LiteCoins at the price of $0.0001 Cent within the United States Dollar Currency System, then: 10,000 * $0.0001 = $1.00 United States Dollar. And now,*

today as of the date: January, 9th of 2025 the unique, whole and complete LiteCoin CryptoCoin is worth: $100 United States Dollars, then: 10,000 * $100 = $1,000,000 United States Dollars or One Million United States Dollars. But, can LiteCoins be cashed out ? Yes, they can.

Why You Need To Do This Right Now ?
We know that you lost your 100 CryptoCoins from the BITCoin CryptoCurrency Platform after the year: 2009. One must start on each CryptoCurrency Platform early on in the game in order to win. IF: you had not lost the 100 BITCoins you would now be worth approximately: U.S. $10 Million as of the date: January, 9th of 2025 as each one whole and complete BITCoin is worth approximately: $92,102.15 United States Dollars.

Instruction Notes: *Only purchase $20 worth of a CryptoCoin Platform that has an extremely low value first @ <= $0.50 Cents within the United States Currency System Per Whole CryptoCoin, then transfer the whole CryptoCoins to either the CryptoWallets that were downloaded onto the Windows Operating System, Google / Custom Android Operating System, Apple iOS Operating System, Unix / Linux Operating System for each respective CryptoCurrency Platform and / or Crypto.com or another online CryptoCoin hosting service after having verified that you can export the RAW CryptoCoin Block Text and print it. $55 United States Dollars is required for each CryptoCurrency Platform where one whole CryptoCoin on that specific CryptoCurrency Platform is valued at <= $0.50 by physically purchasing them at the CoinMe ATM location in order to successfully transfer out a whole 20 CryptoCoins from that specific CryptoCurrency Platfrom at that exact moment in time. Any CryptoCoin that is <= 20 cents will not be able to pay for the $12 fee to successfully transfer out to a private wallet or to a website such as Crypto.com.*

Continue Purchasing $20 or more worth of each specific CryptoCoin every few weeks to every month until achieving owning at least ~20 whole CryptoCoins on the DogeCoin CryptoCurrency Platform, Shiba Inu CryptoCurrency Platform, LiteCoin CryptoCurrency Platform, Polygon CryptoCurrency Platform, Stellar CryptoCurrency Platform, ChainLink CryptoCurrency Platform, Ethereum CryptoCurrency Platform. All of these CryptoCoin Platforms are physically available at the CoinMe ATM locations owned by the American Company known as CoinStar. Purchase $20 United States Dollars Worth of a Fraction of one whole BITCoin before the year: mid-2025 because one whole BITCoin will be worth upwards of $250,000 United States Dollars Within 4 – 7 years from the year: 2025.

**** DO NOT SPEND ANY OF THE CRYPTOCOINS. SAVE THEM ALL UNTIL AFTER THE YEAR: 2032 ****

You will be a multi-millionaire by the year: 2032 or approximately within ~10 years from the year: 2025 potentially worth 20 million United States Dollars or more. Do it now, before the month and year: mid-2025. The dedicated and unassociated phone number and the dedicated and unassociated electronic mail address will make it impossible for anyone to steal your CryptoCoins or figure out what accounts your CryptoCoins are hosted on because you will never share the dedicated phone number or the dedicated electronic mail address with anyone. The accounts will never travel anywhere because you will only authenticate into them from a dedicated location in the area where you purchased them.

Pre-Paid Cell Phones :: Network Carrier :: AT&T
